Forecast of AR

Thr, June 25 (Week 1.5)
Vuforia

Before ARCore (Google/Android) and ARKit (Apple)

Qualcomm started, sold to PTC in 2015 and still alive.
HoloLens 1 (2016)

I would call this as the beginning of modern AR headsets. The first headset with a mixture of firm registration, a application development support, availability to anyone, and some affordability (though still $3000).
HoloLens 2 (2019)
When will AR really become a thing?

The difficulty of running an AR (headset) business

: If you want to sell hardware, there is no software to justify buying it.

If you want to sell software, there is no hardware to even install it.
Examples of PCs/Smartphones

Hardware quickly becomes better as long as the improvement is demanded.
HoloLens 3 could launch in 4 years with infinite field of view, says Alex Kipman

Apple reportedly plans 2022 release for first AR headset, followed by AR glasses in 2023

Apple managers say AR glasses could supplant the iPhone in a decade

Facebook says it will build AR glasses and map the world

The Ultimate Ad Engine

Browsers have cursor movements, clicks, and personalized ads.

AR can have eye movements, facial expressions, hand movements, environmental detection, and then personalized ads mixed into the real world.
